MALE INCONTINENCE WORKSHOP (Readjustable Sling)

WORKSHOP

MALE INCONTINENCE WORKSHOP (Readjustable Sling)

University Hospital Gasthuisberg of KU Leuven / Urology Department

Prof. Dr. Dirk De Ridder

The University Hospital Gasthuisberg of KU Leuven is well recognised as one of the centres that leads the European urology.

Prof. Dr. Dirk De Ridder will conduct the Male Incontinence Workshop at the Urology Department / University Hospital Gasthuisberg of KU Leuven.

This workshop is oriented to experienced Surgeons interested in incorporating the advantage of readjust ability for the treatment of Male urinary incontinence patients.

During one day you will have the opportunity to review the interventions that we all have been using during many years, finalizing in a Readjustable System that permits the urethral support level readjustment, whenever needed, during patients life.

In the workshop you will learn how to take advantage of the possibilities of this revolutionary system.

The team of Prof. Dr. Dirk De Ridder will perform a life intervention, and a readjustment of a patient previously implanted with the Remeex system.
